### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Delanty (US 2,208,021).

Delanty discloses a running board assembly for a rail car comprised of a support structure made of metal bars 11, 12 and a bushing 24, made of a compressible, energy absorbing material. The bushing 24 protrudes upward through the support structure 11, 12 and extends outward under the support structure 11, 12. The bushing 24 covers a mounting bracket 19a from metal to metal contact between the support structure 11, 12 and the mounting bracket 19a. A hole is formed through the support structure 11, 12, through the bushing 24 and through the mounting bracket 19 a. This hole receives a threaded bolt through the three layers to secure the support structure 11, 12 to the mounting bracket and is mated to a nut 28 on the underside of the mounting bracket 19a. By tightening the nut against the underside of the mounting bracket 19a the support structure is isolated from movement and vibration by the bushing 24. The bushing 24 and support structure 11, 12 are supported on a raised portion 21 of the mounting bracket 19a.

### **Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Murphy (US 2,102,276), Burnett (US 2,278,191) and Bartsch (US 2,401,401) all disclose various forms of mounting structures for running boards on railcars.
